

AUTOMATING POS SERVICES WITH CLOUD-BASED SOLUTION

Industry
POS

Microsoft
.NET

Technology
Symfony | PHP

ABOUT PROJECT

Our Norwegian client required a POS solution that would automate the process of tracking sales, cash flow, inventory management, and bookkeeping and streamline the operations of businesses like restaurants, bars and retails. Their idea was to integrate POS hardware with the POS solution in order to streamline the sales process.

THE REQUIREMENT

- Enable business data accessibility from any location.
- Easy integration of the POS solution with other software systems and POS hardware.
- Generate financial and accounting reports for data-driven decision making.

“ The Cloud POS increased data visibility, mobility, security, and streamlined information and operation management across multiple channels. ”
